BIOCHEMISTRY

Cholinesterase / Pseudocholinesterase (Serum)

Cholinesterase / Pseudocholinesterase 6,896.00 5100 - 11700 U/L  
Colorimetric Assay

Interpretation:

Cholinesterase is also called pseudocholinesterase. The main indicators for measuring pseudocholinesterase are:

- Monitoring exposure to cholinesterase inhibitors
- As a liver function test
- Diagnosis of genetic variants

The most important use of cholinesterase is to measure the exposure to organophosphorus compounds like organophosphate insecticide which are irreversible inhibitors of both pseudocholinesterase and acetylcholinesterase. For individuals working in industries manufacturing organophosphate insecticides, a baseline measurement is recommended. A decrease of 40% from baseline produces symptoms and a decrease of 80% from baseline leads to severe symptoms. Pseudocholinesterase reflects acute toxicity while acetyl cholinesterase ( true cholinesterase) reflects chronic exposure.

Decreased levels ·

- Organophosphate poisoning
- Liver diseases like Acute hepatitis, Cirrhosis & Metastatic carcinoma to liver
- Malnutrition

Dr. Sanjeeta  
MBBS,MD (Biochemistry)  
Consultant Biochemist

Disclaimer:

1. All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
2. Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
3. Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
4. Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
5. Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
6. Genetic reports as well as reports of other tests should be correlated with clinical details and other available test reports by
