NAME : MR.SI0033 REFERRED BY : SELF VISIT NO : VAMP26148097
AGE : 40Y 0M 0D ZERO TARIFF CLIENT CODE COLLECTED ON : 21-04-2026 10:00
GENDER : Male LAB MR# : AAMP01479376 RECEIVED ON : 21-04-2026 18:11
OP / IP / DG # : APPROVED ON : 22-04-2026 16:35
REPORT STATUS : Final Report

Test Name	Result	Biological Ref. Interval	Unit
-----------	--------	--------------------------	------

SEROLOGY AND IMMUNOLOGY

Hepatitis B Core Antibody Total (HBcAb- Total) (Serum)

HBcAb- Total ELISA	0.03	< 0.9- Negative 0.9 - 1.1- Equivocal >1.1- Positive	Index Value
-----------------------	------	---	-------------

Interpretation:

Any patient showing an equivocal result should be re-tested on a second sample taken 1-2 weeks after the initial sample. Diagnosis of an infectious disease should not be established on the basis of a single test result. The patient's clinical history symptomatology, as well as other diagnostic data should be considered. Anti- HBc Total is the first antibody to appear usually 4-10 weeks after appearance of HBsAg, at the same time as clinical illness and persists for years or maybe lifetime. It is almost always present during chronic HBV infection. It detects virtually all individuals who have been previously infected with HBV. Detection of Anti HBc Total positive donors reduces incidence of post transmission Hepatitis and possibility of other viral infections like HIV due to frequency of dual infections. This antibody may be seen in 2% of routine donors without any other serological marker and with normal liver enzyme levels. This indicates recovery from subclinical HBV infections. Anti HBc Total is not protective and cannot be used to distinguish Acute from Chronic infection. Discrepant results may be observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy. For heparinized patients, draw specimen prior to heparin therapy as presence of fibrin leads to erroneous results.

Dr. G. Amitha
MBBS, MD (MICROBIOLOGY)
Consultant Microbiologist

Disclaimer:

1. All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
2. Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
3. Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
4. Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
5. Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
6. Genetic reports as well as reports of other tests should be correlated with clinical details and other available test reports by a qualified medical practitioner. Genetic counselling is advised in genetic test reports by a qualified genetic counsellor, medical practitioner or both.
