SEROLOGY AND IMMUNOLOGY

Hepatitis B Surface antigen (HBsAg) - Spot Test (Serum)

Hepatitis B Surface antigen (HBsAg) - Spot Test Negative Negative
Immunochromatography

Interpretation:

Test Observations:

HBsAg is the first marker to appear after Hepatitis B infection and may be observed 2 or 3 weeks before the clinical and biological symptoms of the disease appear. Its period of presence may be very short (a few days) or very long (several years). HBs Ag persisting beyond 6 months in the serum denotes "chronic hepatitis". Because of the existence of numerous asymptomatic chronic carriers, hepatitis B represents an important transfusion hazard and the prevention of the transmission is based upon the detection of the HBs Ag at the time of each blood donation. This is a screening test and all positive samples must be confirmed by confirmatory tests like Neutralization assay or PCR. False positive results can be obtained due to the presence of other antigens or elevated levels of Rheumatoid factor (RF), although this is seen in less than 1% of the samples tested.

Dr. G. Amitha
MBBS, MD (MICROBIOLOGY)
Consultant Microbiologist

Disclaimer:

1. All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
2. Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
3. Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
4. Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
5. Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
6. Genetic reports as well as reports of other tests should be correlated with clinical details and other available test reports by a qualified medical practitioner. Genetic counselling is advised in genetic test reports by a qualified genetic counsellor, medical practitioner or both.
7. Samples will be discarded post processing after a specified period as per the laboratory's retention policy. Kindly get in touch with the lab for more information.
