SEROLOGY AND IMMUNOLOGY

Herpes Simplex Virus 1 IgG - Serum (Serum)

HSV 1 IgG 0.30 Negative : < 0.9 : Index  
CLIA Borderline : 0.9 – 1.1  
Positive : > 1.1

Interpretation:

The Herpes simplex virus (HSV) is a member of the Herpesviridae family, of which two types are known: type 1 (HSV-1) and type 2 (HSV-2) which present slight antigenic differences. HSV-1 causes chiefly oral-facial lesions, while HSV-2 is mainly responsible for genital lesions.

Positive result indicates past infection with Herpes Simplex virus 1 or administration of HSV 1 immunoglobulins. The test cannot be used as only method for a clinical diagnosis. The test result should be used in conjunction with information available from the evaluation of the case history or other diagnostic procedures.

Pregnant females with positive HSV 1 specific IgG antibodies are considered to be immune and hence risk of transmission of infection to fetus is minimal.

Negative result indicates person has not been exposed to Herpes Simplex virus 1 in the past. Patients with negative results in suspected disease should be re-tested after 10-14 days. False negative results can be due to immunosuppression or due to low/undetectable level of IgG antibodies. Negative results may not exclude an eventual infection.

For borderline results, a second serum sample obtained 8-14 days later, should be tested in parallel to determine an increase in the IgG antibody level.

Dr. G. Amitha  
MBBS, MD (MICROBIOLOGY)  
Consultant Microbiologist

Disclaimer:

- All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
- Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
- Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
- Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
- Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
