SEROLOGY AND IMMUNOLOGY

Herpes Simplex Virus 1 IgM - Serum (Serum)

HSV 1 IgM ELISA	0.02	Negative : < 0.8 Borderline : 0.8 – 1.2 Positive : > 1.2	Ratio
--------------------	------	--	-------

Interpretation:

The Herpes simplex virus (HSV) is a member of the Herpesviridae family, of which two types are known: type 1 (HSV-1) and type 2 (HSV-2) which present slight antigenic differences. HSV-1 causes chiefly oral-facial lesions, while HSV-2 is mainly responsible for genital lesions, but this distinction is not binding.

Positive result for Herpes Simplex virus 1 IgM may indicate acute infection, reinfection or reactivation of latent virus. Persistence of low level HSV 1 IgM antibodies following post infection over a long period is not uncommon. False positive reaction may occur due to high levels of rheumatoid factor or cross reactivity by HSV 2 & during the course of other viral illnesses.

Negative result for Herpes Simplex virus 1 IgM does not rule out the possibility of infection. Retesting is recommended after 8-14 days. Seroconversion or rising titre indicates presence of active infection. False negative reaction may be due to processing of sample collected early in the course of disease or absence of immune response.

Dr. G. Amitha
MBBS, MD (MICROBIOLOGY)
Consultant Microbiologist

Disclaimer:

1. All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
2. Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
3. Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
4. Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
5. Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
6. Genetic reports as well as reports of other tests should be correlated with clinical details and other available test reports by a qualified medical practitioner. Genetic counselling is advised in genetic test reports by a qualified genetic counsellor,
