SEROLOGY AND IMMUNOLOGY

Helicobacter Pylori IgA Antibodies (Serum)

Helicobacter Pylori IgA Antibodies 0.03 Negative :< 0.9  
ELISA Equivocal: 0.8-1.1  
Positive :> 1.1  
ABL

Interpretation:

Note: Equivocal results should be retested after 2-4 weeks.

Comments:

Helicobacter pylori is a gram negative bacteria responsible for about 80-90% cases of gastritis and suspected to be a major co-factor for the development of gastric and duodenal ulcers. The colonization of gastric and duodenal mucous membranes with Helicobacter pylori can be detected serologically by enzyme immunoassay tests. Detection of IgA antibodies indicates acute infection even if no bacteria are detected on mucous membrane biopsy, indirect immunofluorescence or urease test.

Disclaimer:

1. All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
2. Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
3. Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
4. Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
5. Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
6. Genetic reports as well as reports of other tests should be correlated with clinical details and other available test reports by a qualified medical practitioner. Genetic counselling is advised in genetic test reports by a qualified genetic counsellor,
