SEROLOGY AND IMMUNOLOGY

Lyme Disease (Borrelia Burgdorferi IgM) (Serum)

Borrelia Burgdorferi - IgM 5.32 Negative : <18 AU/mL
CLIA Equivocal: >18- <22
Positive : >=22

Interpretation:

Lyme disease is caused by a tick borne spirochete, Borrelia Burgdorferi. IgM antibodies may be detectable within 1-2 wks following the tick bite, but may be delayed for 3-6 wks. The IgM antibodies may be present for months. A negative result does not rule out the possibility of infection in a patient. Patient with clinical history / symptoms suggestive of Lyme disease may be retested in 2-4 wks. A positive result must be interpreted with caution. Cross reactivity has been seen with syphilis, relapsing fever, Rocky mountain spotted fever, auto immune diseases, RA, SLE, CMV, EBV infection. The continued presence or absence of antibodies cannot be used to determine success or failure of therapy.

Dr. G. Amitha
MBBS, MD (MICROBIOLOGY)
Consultant Microbiologist

Disclaimer:

- All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
- Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
- Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
- Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
- Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
- Genetic reports as well as reports of other tests should be correlated with clinical details and other available test reports by a qualified medical practitioner. Genetic counselling is advised in genetic test reports by a qualified genetic counsellor, medical practitioner or both.
- Samples will be discarded post processing after a specified period as per the laboratory's retention policy. Kindly get in touch with the lab for more information.
- If accidental damage, loss, or destruction of the specimen is not attributable to any direct or negligent act or omission on the part of Ampath Labs or its employees, Ampath shall in no event be liable. Ampath lab's liability for a lack of services, or other mistakes and omissions, shall be restricted to the amount of the patient's payment for the pertinent laboratory services.
